

Electrum SIG Meeting Minutes 2021-04-21

=====

1. Status of current work - documentation, new version, further tasks
2. Discussion: kralverdes addition to electrumx, testcases, further work
3. Discussion: more electrumx server, kralverde, hyperpeek need theirs for testing causing trouble on mainnet as they are currently the only ones
4. Discussion: Intermittent problem of electrumx with sync so it gets stuck, solutions
5. Discussion: Create a new official release "as is" to support 3rd parties
6. Offer from RealBokito | assetsexplorer.com to discuss extended metadata

=====

kralverde completed Electrumx 1st draft to support assets

- created a server database for assets
- added client-server protocol extension to support assets
- maintain an asset index on the node (might not be necessary)

It should be possible to view some information on the client, but not yet do anything

Need to go back to baseline and add new RVN code

We are not pursuing the source documentation project at this time since few volunteers

Electrumx is hanging until compacting or resyncing- not sure the cause

- wait for other complaints

We still need to move everything to the SIG github account; still scattered

We need to clean up the client by starting again from base and adding the changes.
